

Next Generation SCUBA

THE ANSWER TO TOUGH DEMANDS

We've built on 30 years of performance to create the new generation compact close-coupled submersible SCUBA, delivering even greater levels of reliability and flexibility.

Its innovative design makes SCUBA a real answer to the toughest demands and the most reliable solution for extreme applications such as high-sand and highly chlorinated environments.

SCUBA

THE ANSWER TO
TOUGH DEMANDS

A NEW WEAR RING AND AN ANODE SYSTEM
TO HANDLE THE MOST EXTREME CONDITIONS.

Innovative wear ring design.

With 82% of desert area, Oman was the perfect place to test our new Scuba wear ring: sand-proof, specifically designed for extreme applications and tested with 100 times the declared limit of sand resistance. The response was fearless. A real answer to the toughest demands.

Integrated pump anode system.

Our special stainless steel construction achieves 200 PPM chloride resistance. Thanks to Xylem expertise and a factory-made anode system, we raised the bar even higher: 250 PPM that saves the day in the face of brackish water applications.
